“Speed Makes Trust”

Nankai Seiko continues to flourish based on our principles of
“Originality” “Development Power”, and “Speed”
with an attitude unchanged since our founding.

We continue to be a pioneer in stainless steel bearings,
taking on challenges others will not or cannot.
We always strive to increase customer satisfaction and earn trust.

Since 1946

Support for special environments and applications

Whether corrosive, chemical, vacuum, high-temperature, or clean, we manufacture the optimal product whatever your environment.

►Page 6

Support for specified grease and clearance

We will fill with suitable grease for food, high-temperature, vacuum, clean, or other equipment.

We will also select the most suitable clearance based on the operating conditions.

►Page 70

Support for special designs and various material types

We manufacture bearings with the most suitable designs and materials for the facility and equipment, such as grooving on the outer ring, wide, thin-walled, or non-standard size.

►Page 71

SMT

SS

Use our well-established small lot, quick delivery system.

In the quantity you need when you need it -
we deliver special products and small lots in short delivery times.
Use our service with confidence.

We offer support for bearing improvement.

We offer free diagnosis of bearings.
We will suggest the best fixes for bearing failures
in all special environments.

environment

Transportation

General

AISI 440C stainless steel bearings have resistance to rust, corrosion, and high temperatures.

The 6800, 6900, 6000, 6200 and 6300 ranges are available from stock.

Features

1. Usable in environments of higher temperatures than SAE 52100 chrome bearing steel

Specifications	Temperature
ZZ Type	-40 to 150 °C / -40 to 302 °F
2RS Type	-30 to 110 °C / -22 to 230 °F
Open Type	Subject to lubrication

2. Available with snap ring

Product Specifications

Standard Specifications	
Inner and Outer Rings	AISI 440C
Balls*1	AISI 440C
Retainer	AISI 304
Shield	AISI 304
Seal*2	Nitrile rubber
Snap Ring	AISI 304
Lubricant*3	Heat-resistant grease
ISO Tolerance Class	Normal

The following special specifications are also available.

*1 Ceramic balls (Silicon Nitride Si₃N₄)

*2 Fluorine rubber seal

*3 Heat- and chemical-resistant fluorine grease, food grade grease, and other special greases

*Other C3 or C4 radial clearance

Applications

Food processing machinery, cleaning equipment, carrier device in a watery environment, LCD and semiconductor manufacturing equipment, other equipment used in high temperature and humidity environments.

Corrosion Resistance

Nitric Acid	95% to 100% solution	normal	○	×
	95% to 100% solution	boiling	×	×
Hydrogen Peroxide			○	△
Acetic Acid			○	×

* ○ No effects
△ Slightly affected
× Affected
— No data

* Results may differ from the data on the left depending on the environments and conditions.

Precautions

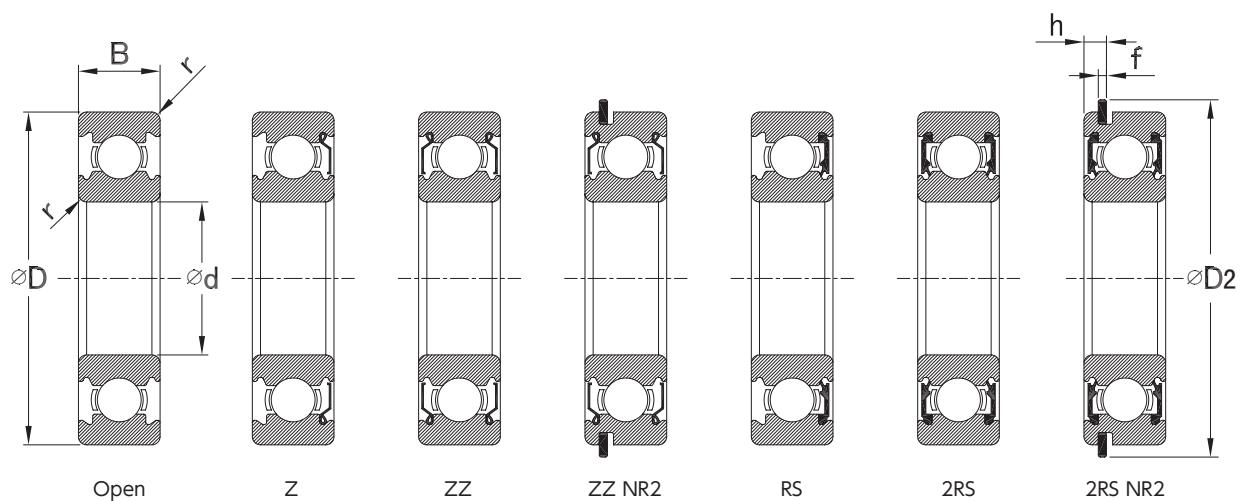

1. AISI 440C stainless steel is magnetizable.
2. AISI 440C stainless steel may corrode depending on the environments and conditions.

AISI 304

Stainless Steel Bearings

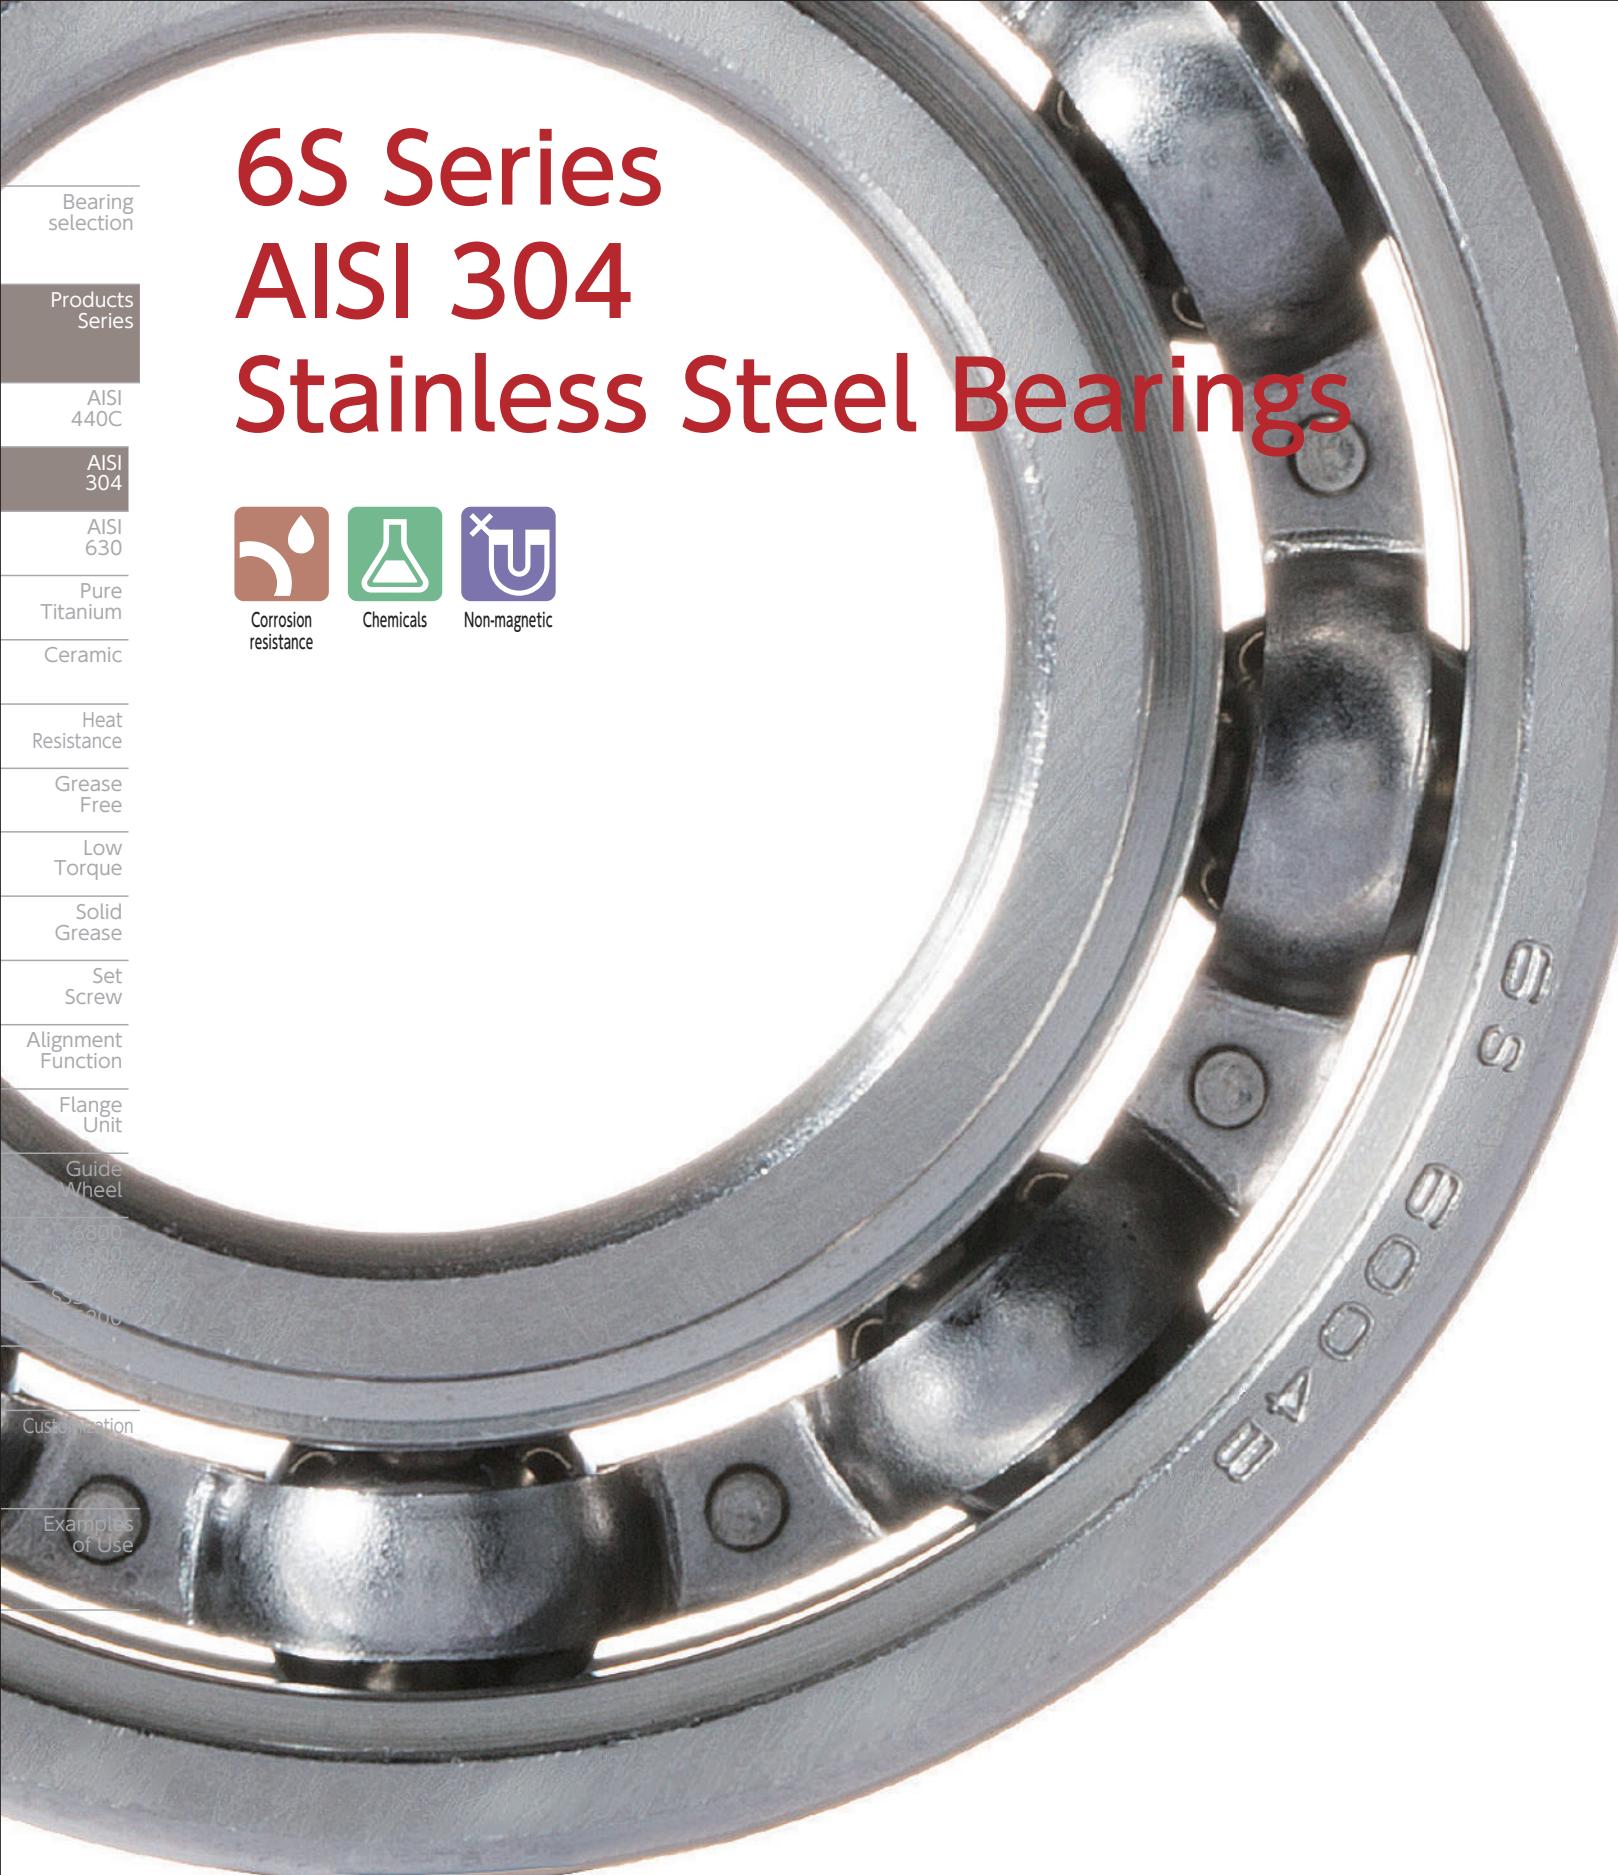

Corrosion
resistance

Chemicals

Non-magnetic

AISI 304 stainless steel is widely used as a corrosion- and heat-resistant steel and is also a nonmagnetic steel. It is most suitable in corrosive environments where AISI 440C stainless steel cannot be used.

Features

1. Higher corrosion resistance than AISI 440C stainless steel bearings.
 2. Non-magnetic *.
 3. Heat-resistant temperature of standard specifications is the same as SS series.
- [Difference in properties by the material used]

Precautions

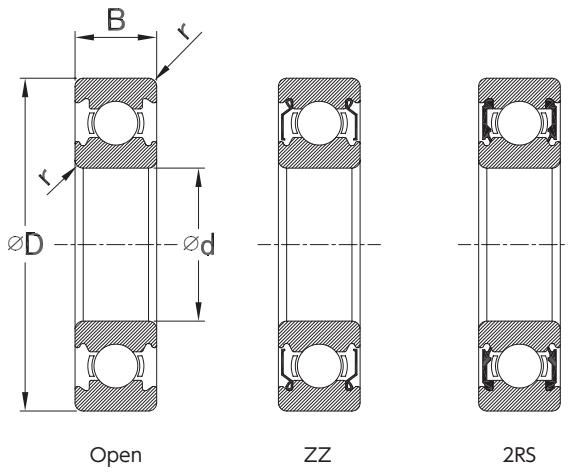

For light load and low rotation. AISI 304 stainless steel is not suitable for use under heavy load or at medium to high rotation where SAE 52100 chrome steel and AISI 440C stainless steel are usable, due to the characteristics of the material.

Examples of Use

Features

- Higher corrosion resistance than AISI 440C stainless steel bearings.
- Can be used for heavy-load and high-rotation applications for which AISI 304 stainless steel ball bearings would be unsuitable.
- Available for various types of applications with its heat- and chemical-resistant fluorine grease pre-packed as standard lubricant.
- Hybrid type with silicon nitride ceramic balls (Si_3N_4).

[Difference in properties by the material used]

Examples of Use

Features

- Corrosion resistance usable in severer corrosive environment than AISI 304 stainless steel bearing, by using high corrosion resistant pure titanium class 2 for outer and inner rings.
- Human-friendly without allergen reactions, as usable as in artificial joints.
- Non-magnetic bearing made of pure titanium rings and ceramic balls.
By using ceramic balls allow insulation as well.
- Usable in low temperature environment by good low temperature toughness.
- Lower specific gravity: pure titanium 4.5 < SAE 52100 7.8

* Limiting radial load and limiting speed are figures when using the bearings without lubricants.
Limiting radial load is estimated to have a total rotation speed of 1 million revolutions.
The bearings are only available as open type.

Features

- Operating temperature is up to 250°C/482°F, except sealed type.
- AISI 440C stainless steel has lower hardness decrease ratio and smaller dimension changes than SAE 52100 bearing steel in high temperature environment.
- AISI 440C stainless steel is superior to SAE 52100 bearing steel in oxidation resistance in high temperature environment.
- Filling heat-resistant fluorine grease enables lubrication in high temperature environment.

Product Specifications

Standard Specifications	
Inner and Outer Rings	AISI 440C
Balls	AISI 440C
Retainer	AISI 304
Shield	AISI 304
Seal	Fluorine rubber*
Lubricant	Heat-resistant fluorine grease
Radial clearance *1	C4

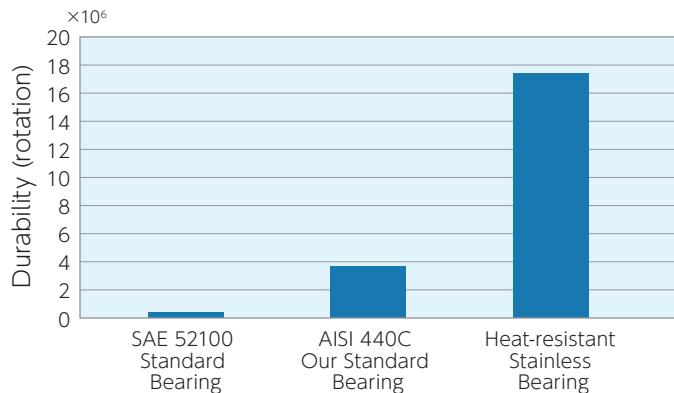

*Sealed type is usable up to 200°C/392°F

The following special specifications are also available.

*1 Special clearance, such as C3 or C5.

Performance

Durability in high temperature environment

Test Conditions

Bearing : 6004
Temperature : 250°C/482°F
Radial load : 1000N
Rotation speed : 2000min⁻¹

*The above performance values are our test results and are not guaranteed values.

Applications

Device around furnace, oven, heater, drying equipment, vacuum apparatus and other high temperature area.

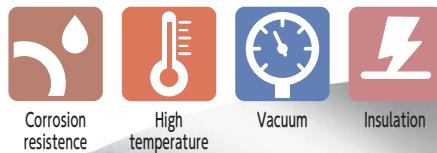

Precautions

Under high temperature environment, radial internal clearance is decreased depending on the difference of materials used for shaft, i.e. linear expansion coefficient, which may interfere with the rotation of the bearing. Please consider the thermal expansion sufficiently and select fitting and material of the shaft. Please contact us for further information.

Dimensions of heat-resistant stainless bearings and heat-resistant hybrid bearings are shown on pages 30 and 31.

Features

- Operating temperature is up to 250°C/482°F, except sealed type.
- Hybrid type incorporating ceramic balls into the outer and inner rings of AISI 440C stainless steel.
- Longer grease life, by lower heat generation with ceramic balls.
- Less running cost by longer lifetime.

Items	Unit	Silicon nitride Si ₃ N ₄	Stainless steel AISI 440C	Bearing steel SAE 52100	Superiority of ceramic ball
Density	g/cm ³	3.2	7.8	7.8	Lowering centrifugal force of balls
Heat expansion coefficient	×10 ⁻⁶ /°C	3.2	10.5	12.5	Small variation of internal clearance by temperature rise
Hardness	HV	1400	700	740	Less deformation and high rigidity
Young's modulus	GPa	320	200	210	Reducing friction by high rigidity
Heat resistance	°C (°F)	800 (1472)	400 (752)	180 (356)	Maintaining rigidity in high temperature
Conductivity	—	No	Yes	Yes	Preventing electric corrosion

TC Series Grease-Free Bearings

Corrosion
resistance

High
temperature

Vacuum

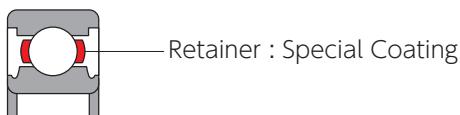

Non-grease

The TC series is suitable for environments where the grease can not be used, such as a vacuum or high temperature application.

Features

- Operating temperature is up to 300°C/572°F, except sealed type.
- Smooth rotation by low torque, except 2RS type.
- Usable in environments where grease can not be used, by special coating on retainer.

Product Specifications

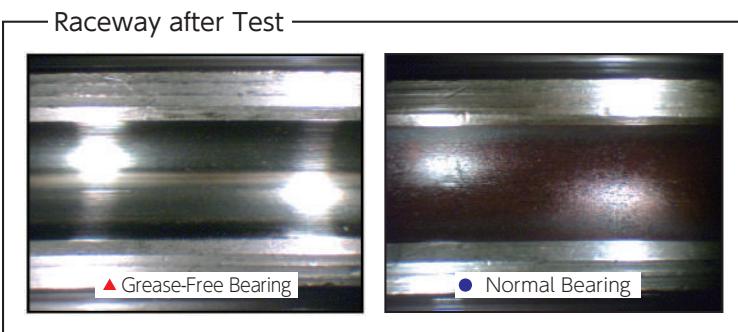

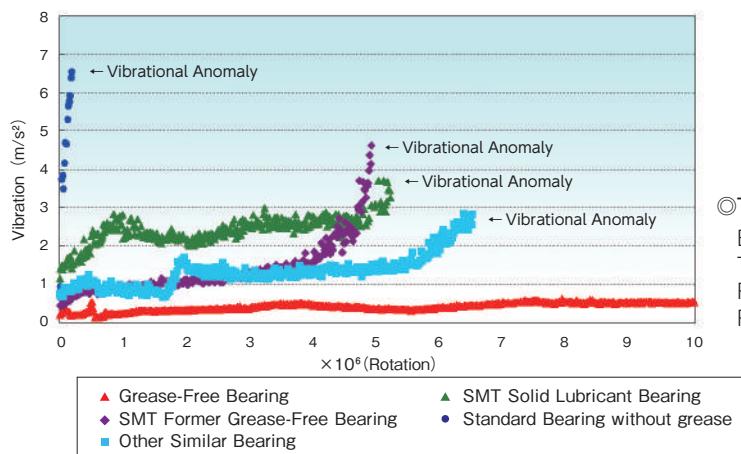

Standard Specifications	
Inner and Outer Rings	AISI 440C
Balls* ¹	AISI 440C
Retainer	AISI 304 + Special coating
Shield	AISI 304
Seal* ²	Nitrile rubber
Radial clearance	C4

The following special specifications are also available.

*1 Ceramic balls (Silicon Nitride Si₃N₄)

*2 Fluorine rubber seal

Performance

Applications

Vacuum apparatus, LCD and semiconductor manufacturing equipment, film manufacturing equipment, other equipment used in high temperature.

Special Low Torque Lubricant Bearings

Corrosion
resistance

Clean

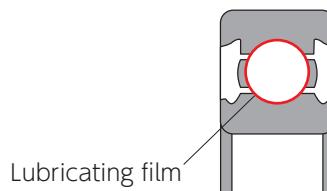

Non-grease

A very low torque rotation is achieved because grease is not used. Ideal when you want to reduce rotational resistance in an application such as "free spinning rollers".

Features

1. Low torque compared to conventional bearings
2. By applying a lubricating film to the inside of the bearing, it can be used where oil leakage is not desired.
3. Low dust generation
4. The operating temperature is up to 50°C/122°F.
5. Used for light loads

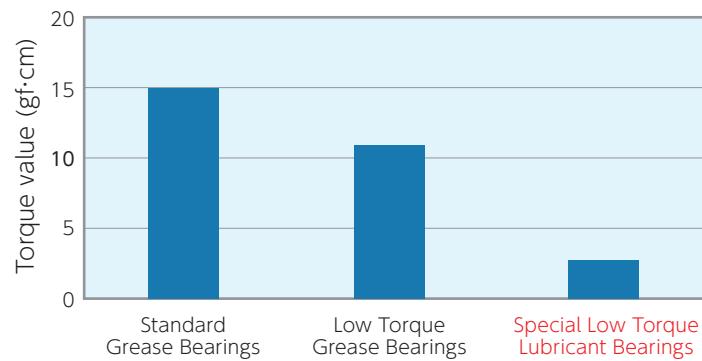

Product Specifications

Standard Specifications	
Inner and Outer rings	AISI 440C
Balls	AISI 440C
Retainer	AISI 304
Shield	AISI 304
Lubricant	Lubricating film

Performance

Measured results at the start of rotation

◎Measurement conditions

Bearings: SS 6004 ZZ

*The above performance values are our company measurement results and are not guaranteed.

Applications

Free spinning rollers, film transfer rollers, clean room rollers, LCD and semiconductor manufacturing equipment

Precautions

- Do not use in areas exposed to water, steam, chemicals, or oils.
- Do not use this product in a dusty environment as it is more likely to be damaged than regular products if foreign substances enter.

Dust

By fully packing the inside space of the bearings with solid grease, dust is less likely to enter, resulting in a longer bearing life.

Features

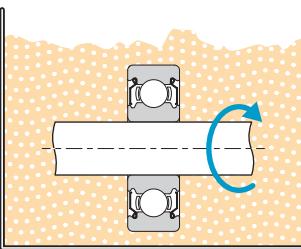

1. Solid grease is retained inside the bearing even in wet or humid environments.
2. Solid grease contains NSF H1-certified food machine grease and FDA-compliant resin.
3. The operating temperature is from -20°C to 80°C/ -4°F to 176°F.

Product Specifications

Standard Specifications	
Inner and Outer Rings	AISI 440C
Balls	AISI 440C
Retainer	AISI 304
Shield	AISI 304
Seal	Nitrile rubber
Lubricant	Solid grease

Performance

Durability in dusty environments

◎Test conditions

Bearing : SS 6004
 Temperature : room temperature
 Radial load : 1000N
 Rotating speed : 500min⁻¹
 Powder particle size : about 0.02mm

*The test finished in 400 hours without any problems.

The above performance values are our company test results and are not guaranteed.

Applications

Powder equipment , food machinery, cleaning equipment, agitators, textile machinery, papermaking machinery

Precautions

- A load of at least 5% of the limiting radial load in the dimension chart is required to rotate the balls without slipping.

Examples of Use

Features

- Secure fastening by set screw prevents creeping between shaft and bore
- Free from abrasion powder caused by creeping
Suitable for use in such environment like clean room where powder dust is not allowed
- Heat-resistant temperature of standard specifications is the same as SS series

Product Specifications

Standard Specifications	
Inner and Outer Rings	AISI 440C
Balls *1	AISI 440C
Retainer	AISI 304
Shield	AISI 304
Set screw	AISI 304 equivalent
Lubricant *2	Heat-resistant grease

The following special specifications are also available.

*1 Ceramic balls (Silicon Nitride Si₃N₄)

*2 Chemical- and heat-resistant fluorine grease, food-grade grease, and other special greases

Applications

Food processing machinery, cleaning equipment, LCD and semiconductor manufacturing equipment, carrier device in a watery environment, other equipment used in environments with high temperatures and high humidity.

Precautions

Please refer to the chart for the tightening torque.

Too much torque may damage the bearing. Adhesive bond is not recommended that may increase the tightening force and result in the breakage of bearing.

Tightening torque

Set screw size	Tightening torque N·m

Stainless Bearings with Aligning Ring

Corrosion
resistanceHigh-load
environment

Transportation

The aligning feature allows for the misalignment of roller or shaft.

This allows the bearings to require less maintenance and less downtime.

Features

1. Corrosion Resistance

Made of AISI 440C stainless steel, and suitable in a corrosive environment, in clean room and for food machinery.

Examples of Use

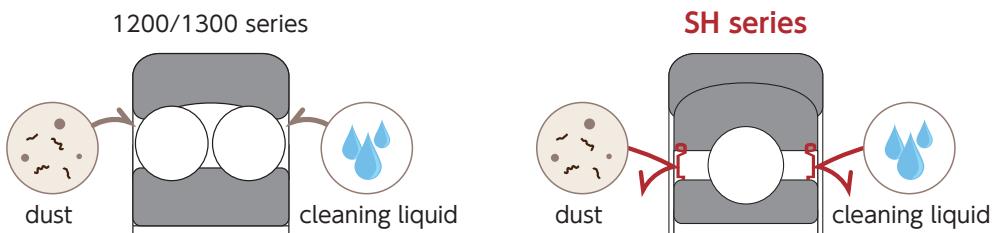

2. Aligning Function

Reducing the excess strain on bearing, by aligning the flexure of the conveyor roller's shaft or the error of shaft center.

3. Dustproof

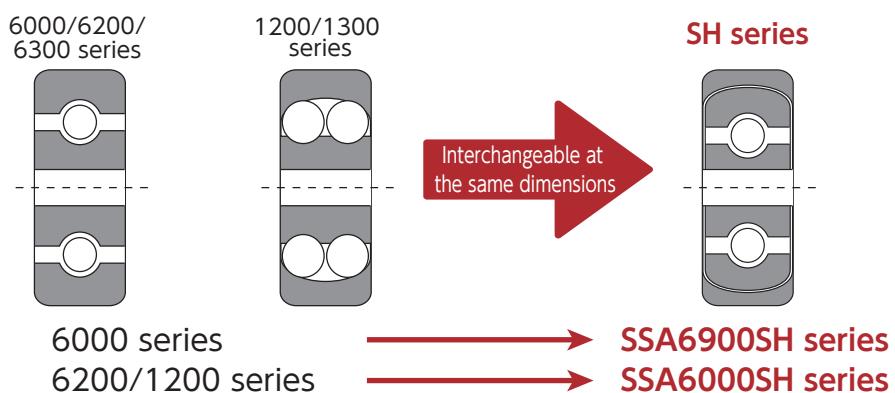

Available with seals and shields, and suitable in a dusty or watery environment.

4. Interchangeability

Interchangeable to 6000, 6200, 6300, 1200 and 1300 series bearings.

The dimensions are the same, except the width of the bearing inside.

5. Heat resistance

Heat-resistant temperature of standard specifications is the same as SS series.

6. Other

The SH series bearings have more advantages than the standard self-aligning bearings made of SAE 52100 steel.

Applications

Rollers for chemical film conveyor, clean room application, food machinery, glass substrate equipment, cleaning system, printing machine conveyor, transportation conveyor, other places where requiring aligning function.

Precautions

- Recommended fit to housing bore is H class of tolerance range. Please consult with us in case of special use conditions.
- Axial load may impair the aligning function, therefore is not recommended.
- Please refer to the chart below for the recommended tightening torque. Adhesive bond is not recommended. It may damage the bearing.

Stainless Bearings with Aligning Ring (for outer ring rotation)

Corrosion
resistanceHigh-load
environment

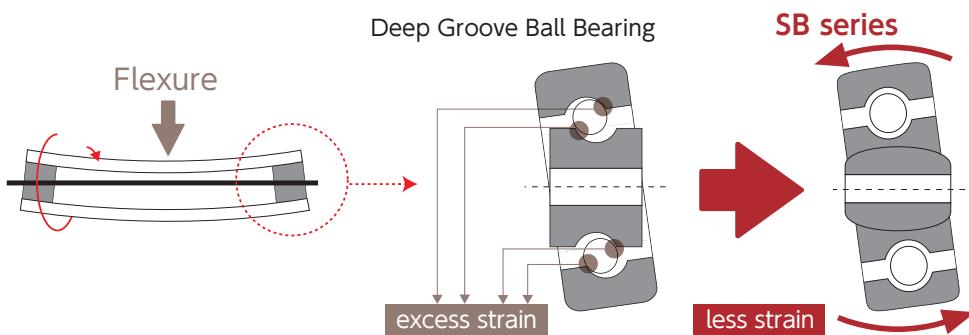

Transportation

This bearing has an alignment function, implemented by incorporating an alignment ring inside the inner ring.

Features

- Used for outer ring rotation
- The alignment function reduces the abnormal load on bearings caused by deflection of rollers, etc.

Product Specifications

Examples of Use

Features

1. Corrosion Resistance

Both bearing and housing made of AISI 440C stainless steel are superior for corrosion resistance and clean environment.

2. Aligning function for SSA and SSXCA type

Aligning function can reduce the stress on the bearing by the error of shaft center and the flexure of the shaft.

3. Fit

The adequate fit is kept between the bearing and the housing because no difference occurs in the amount of expansion and contraction by using AISI 440C stainless steel for both components.

4. Mounting

Best used for the applications that require precise positioning by the precision finishing. As for SSXCA and SSXC types, shaft can be easily fastened with set screws.

Applications

Food machinery, clean room application, chemical processing machine, cleaning equipment, conveyor

Precautions

Axial load may impair the aligning function, therefore is not recommended.

Please refer to the chart below for the recommended tightening torque.

Refrain from tightening over the recommended torque or using a screw locking adhesive.

They can cause bearings to fail prematurely.

Features

- High precision grade by integral construction of bearing and precision-ground W-shaped outer ring.
- Tolerant to both radial and axial load with inner construction of double row angular contact type and also resistant to moment load.
- Available with both SAE 52100 bearing steel and AISI 440C stainless steel.

5800 Series

Double Row Angular Contact Bearings (SAE 52100)

General

Thin-wall type double-row angular contact ball bearings, suitable for compact and lightweight equipment, resulting in low torque and smooth rotation, and designed to sustain axial load in both directions.

Examples of Use

Please let us know what you need.

Bearing filled with this kind of **grease**.

Bearing with loose **clearance**.

Detecting the **cause of bearing failure**.

Materials having **resistance to chemicals**.

How to know the **time for replacement**.

Bearing with **non-standard dimensions**.

A special item in **short delivery**.

An item that is **discontinued**.

Just one **special item**.

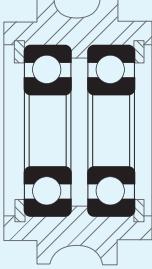

SMT has established a high-mix, low-volume production system, to respond quickly to diverse user needs.

We can manufacture with high precision customized bearings of special designs, with a variety of materials, specified greases, and other features.

■ Examples of responding to user needs

User need	Customized bearing
Bearing for HACCP-compliant food machines and production equipment.	(1) AISI 440C stainless steel bearing with NSF H1 standard grease for food machines (2) AISI 304 stainless steel bearing with NSF H1 standard grease for food machines
Bearing suitable for use in a hot environment.	(1) AISI 440C stainless steel bearing with a heat-resistant fluorine grease (2) Change to a C4 clearance that is larger than the standard clearance
Bearing turning lightly.	(1) Fill with low-torque grease (2) Change to a small amount of grease for lower torque (3) Switch to special low torque lubricant bearings
Bearing suitable for use underwater.	(1) AISI 304 stainless steel bearing with contact rubber seals (2) Fill with water-resistant grease that does not easily flow in water
Bearing integrated with peripheral parts for compactness and precision.	 <p>Current status Two bearings are used for the U-grooved housing</p>  <p>Improvement</p> <ul style="list-style-type: none"> The housing and bearings are integrated into double-row angular bearings Compact and space-saving

Examples of Use

Specified Grease and Clearance

The selection of grease and clearance is a key factor in demonstrating the features of the bearing. SMT will respond to requests and changes in grease filling and clearances according to the operating environment with **short delivery times and small lots from as little as one unit.**

Grease

We meet these needs

- Grease for food machines compatible with H1 grade (compatible with HACCP).
- Low-dust generation grease suitable for use in clean rooms.
- Grease suitable for use in a vacuum environment.
- Grease for a low torque to reduce the starting torque.
- Grease suitable for use in hot and cold environments.
- Water-resistant grease.
- Filling the grease you have.

Examples of greases

Characteristics	Brand	Manufacturer	Thickener	Base oil	Penetration	Operating temperature range
Low temperature	AeroShell 7	Shell	Microgel	Organic ester	296	-73 to 149°C/-100 to 300°F
Food grade Water-resistant	SHC Polyree 462	Mobil	Polyurea	Synthetic	NLGI No.2	-20 to 170°C/-4 to 338°F
Conductive	Multemp ELP	Kyodo Yushi	Carbon Black	Synthetic hydrocarbon	254	-50 to 150°C/-58 to 302°F
High temperature Chemical-resistant Food grade	Barrierta L55/2 H1	NOK Klüber	PTFE	Fluoric	NLGI No.2	-30 to 260°C/-22 to 500°F
High temperature Chemical-resistant	Noxlub BF 4026	NOK Klüber	PTFE	Fluoric	NLGI No.2	-30 to 260°C/-22 to 500°F
High temperature Chemical-resistant Vacuum	Noxlub KF 2024	NOK Klüber	PTFE	Fluoric	NLGI No.2	-50 to 260°C/-58 to 500°F
Low torque High speed rotation	Klüberspeed BF 72-22	NOK Klüber	Urea	Ester	NLGI No.2 to No.3	-50 to 120°C/-58 to 248°F
Low dust generation	AFE-CA	THK	Urea	Synthetic	280	-40 to 180°C/-40 to 356°F

*The product characteristic values above are the grease manufacturer catalog values.

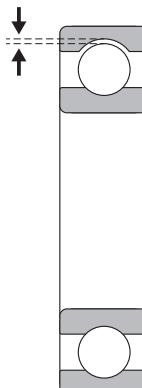

Please note that the specifications are subject to change without notice.

**A variety of greases are available in addition to those listed.
You can also supply us your specific grease.**

Clearance

We meet these needs

- Proper clearance for eliminating thermal expansion caused by a high temperature environment.
- Proper clearance for reducing vibration during high-speed rotation.
- Non-standard clearance.

Examples of clearance

Applications	Clearance
Hot environment	C3, C4, C5
High-speed rotation	C2, CM

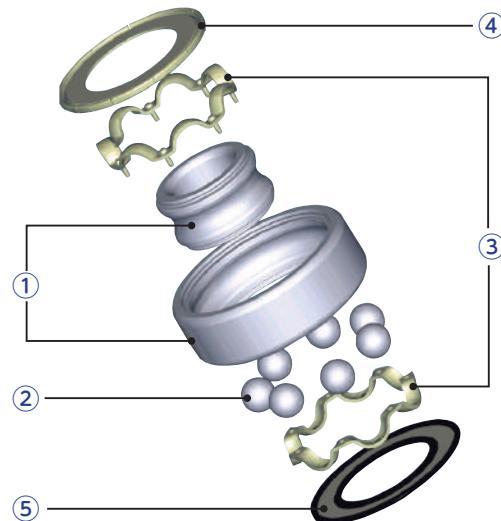

Material Types

In addition to inner and outer ring materials, various materials are prepared for each component of the bearing.

Optimum bearings can be manufactured by combining materials according to the application.

■ Examples of materials

	Parts	Material Examples
①	Inner and outer rings	<ul style="list-style-type: none"> SAE 52100 AISI 440C AISI 304, AISI 316L, AISI 630 Titanium, Hastelloy-equivalent material Ceramics, resins
②	Balls	<ul style="list-style-type: none"> SAE 52100, AISI 440C, AISI 304 Ceramics, special coatings
③	Retainer	<ul style="list-style-type: none"> SPCC • S55C • AISI 304 Special coating, polyamide resin Fluorine resin, solid lubricant
④	Shield	<ul style="list-style-type: none"> SECC, AISI 304
⑤	Seal	<ul style="list-style-type: none"> Nitrile rubber, acrylic rubber Fluorine rubber, fluorine resin

Special Designs

Bearings with special designs are available according to the application, such as V- or U-grooved outer diameter, wide or thin-walled type.

We also cater to customers who want to integrate bearings and peripheral parts.

■ Manufacturable dimensions

Dimensions	
Inner diameter	4mm to 250mm
Outer diameter	12mm to 280mm
Width	4mm to 75mm

*Depending on the specifications, the range of manufacturable dimensions may change.

Support for Bearing Improvement

We offer free diagnosis of bearings.

We can help you solve problems with bearings used in all special environments.

Internal raceway observation

Signs of fretting corrosion generated in an environment with slow rotation and micro-vibrations

Examination of main dimensions, grease, acoustics, and clearance

表2- SE-6005 22 調査結果			
測定項目	暫定規格	No.1	No.2
内径寸子	30	少幅欠陥	良好
外径寸子	60	溝道不整	45
直径公差 (mm)	0.000~0.022	溝道不整	0.011

内輪	—	表面(全面)に剥離、薄い(区域無し)、全面に弱い(区域無し)	表面(全面)に剥離、薄い(区域無し)、全面に弱い(区域無し)
外輪	—	全面に剥離、薄い(区域無し)	全面に剥離、薄い(区域無し)
保持器	—	全面に剥離、薄い(区域無し)	全面に弱い(区域無し)
シール (F)	—	分解時破損	良好

Lifespan and internal clearance calculation

The cause of most failures can be inferred by examining the inside of the bearing.

Based on the examination results, we suggest the best countermeasures using our company's extensive experience in manufacturing and marketing technology, which has been cultivated through the manufacture of customized bearings.

We hope that using our diagnostic support will resolve your bearing problem as soon as possible.

Customization

Examples of Use

Meat Slicer

General

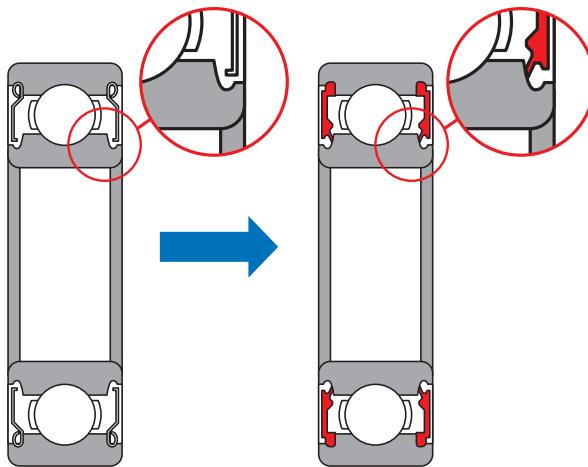

Bearings with contact rubber seals are used in areas requiring dust resistance.

◆ Usage Conditions

Environment : Air

Temperature : Room temperature to 60°C/140°F

Rotating speed: 1200min⁻¹

◆ Conventional Bearings

AISI 440C stainless steel bearings
(non-contact steel plate shield type)

◆ Problems

Bearing life due to foreign matter intrusion

◆ Bearings Adopted

SS Series AISI 440C
Stainless steel bearing
Seal type

◆ Effect

Improved dust resistance and reduction in bearing replacement frequency due to contact rubber seal

LCD Panel Conveyance Equipment

General

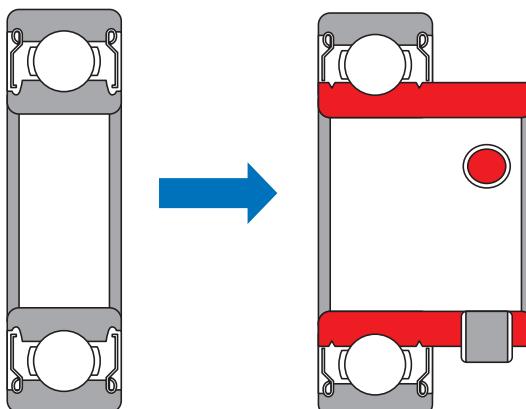

Conveyance equipment, such as for liquid crystal panels, is equipped with stainless bearings with set screw (SSXC Series) that can be easily fastened to the shaft, improving assembly workability, and eliminating the need for other accessories.

◆ Usage Conditions

Environment : Clean room

Temperature : Room temperature

Rotating speed: 50min⁻¹

◆ Conventional Bearings

AISI 440C stainless steel bearings

◆ Problems

Generation of abrasive wear dust due to creep with the shaft

◆ Bearings Adopted

SSXC Series AISI 440C
Stainless bearings with set screw

◆ Effect

Creep prevented and the bearing replacement frequency reduced due to fixing with set screws

Customization

Examples of Use

Film production equipment that suffers from problems caused by shaft flexure and misalignment is equipped with stainless bearings with an alignment function (SH Series).

◆ Usage Conditions

Environment : Air
Temperature : 120°C/248°F
Rotating speed: 100min⁻¹

◆ Conventional Bearings

SAE 52100 steel bearings

◆ Problems

Grease deterioration and flexure of the shaft due to high temperatures, and an increase in rotational torque and shortened life (3 months) due to an error of the shaft center.

◆ Bearings Adopted

SH Series AISI 440C
Stainless bearings with aligning ring

◆ Effect

Improved heat resistance and alignment
Low torque
Extended bearing life (12 months or more)

Transportation Conveyor

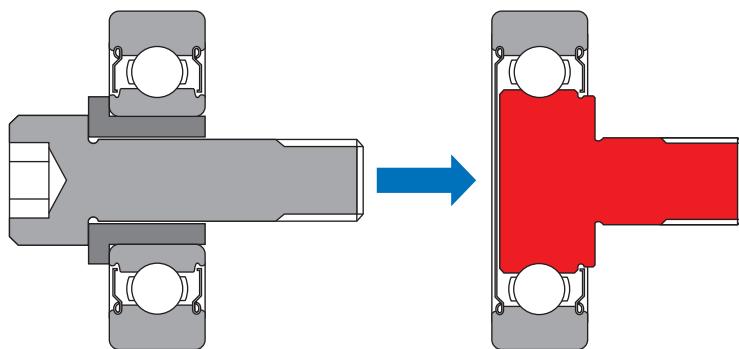

General

Specially shaped bearings with integrated shafts and inner rings are used in areas where the number of accessory parts needs to be reduced or assembly accuracy needs to be improved.

◆ Usage Conditions

Environment : Air
Temperature : Room temperature to 40°C/104°F
Rotating speed: 120min⁻¹

◆ Conventional Bearings

SAE 52100 steel bearings

◆ Problems

Waste of assembly time and money

◆ Bearings Adopted

Customization: Special design

◆ Effect

Reduced assembly time and cost

Drying Furnace Fan

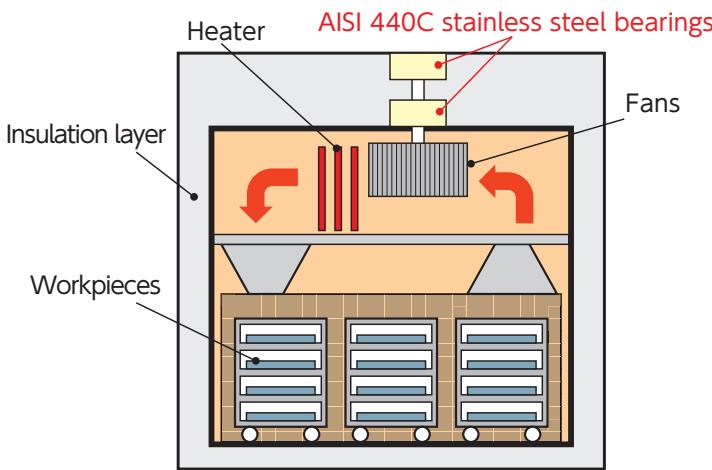

High-Temperature

Grease degradation and seizure become a problem in environments with high temperatures exceeding 100°C /212°F. For such environments, AISI 440C stainless steel bearings (SS Series) with heat-resistant grease as standard are adopted.

◆ Usage Conditions

Environment : Air
 Temperature : 130°C/266°F
 Rotating speed: 1800min⁻¹

◆ Conventional Bearings

SAE 52100 steel bearings

◆ Problems

Short bearing life (2 months) due to grease deterioration

◆ Bearings Adopted

SS Series AISI 440C
 Stainless steel bearings

◆ Effect

Improved lubricity and extended bearing life (12 months) due to heat-resistant grease as standard

Film Manufacturing Equipment

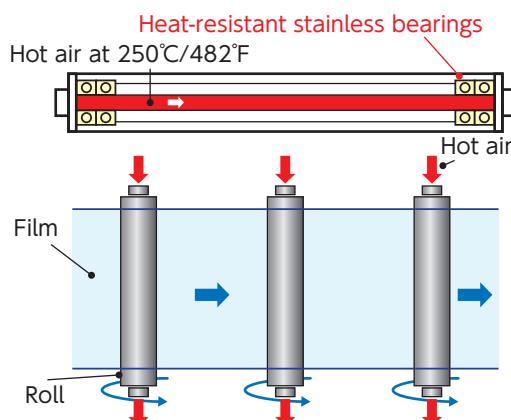

High-Temperature

Heat-resistant stainless bearing, made of AISI 440C stainless steel with heat-resistant fluorine grease are used at high temperatures exceeding 200°C/392°F.

◆ Usage Conditions

Environment : Air
 Temperature : 200°C/392°F
 Rotating speed: 30min⁻¹

◆ Conventional Bearings

SAE 52100 steel bearings

◆ Problems

Short bearing life (2 months) due to grease deterioration

◆ Bearings Adopted

Heat-resistant series
 Heat-resistant stainless bearings

◆ Effect

Improved lubricity and extended bearing life (24 months) due to heat-resistant fluorine grease

Firing Furnace Conveyor

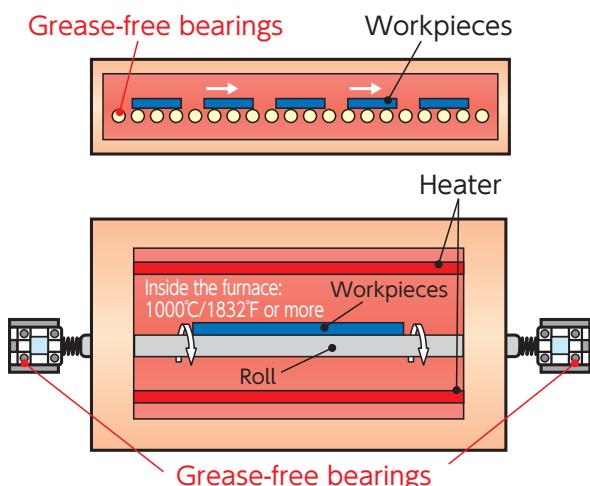

High temperatures exceeding 250°C/482°F make it impossible to use grease. Grease-free bearings (TC Series) with a special coating of solid lubricant are used in this environment.

◆ Usage Conditions

Environment : Air

Temperature : 280°C/536°F

Rotating speed: 10min⁻¹

High-Temperature

◆ Conventional Bearings

AISI 440C stainless steel bearings

◆ Problems

Short bearing life (1 month) due to grease deterioration

Spray Dryer

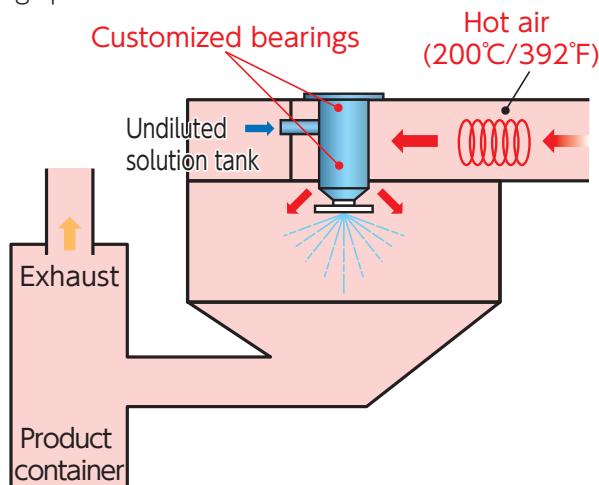

The centrifugal force of the ball is a problem in equipment that uses bearings at high speeds. Customized bearings using low-density ceramic balls are used for such equipment.

◆ Usage Conditions

Environment : Air

Temperature : 130°C/266°F

Rotating speed: 40000min⁻¹

High-Speed Rotation

◆ Conventional Bearings

SAE 52100 steel bearings

◆ Problems

Short bearing life (1 month) due to high-speed rotation

◆ Bearings Adopted

Customization: Various materials

SS Series AISI 440C

Stainless steel bearings

+ Ceramic balls

◆ Effect

Reduced centrifugal force of the balls and extended bearing life (12 months) due to use of ceramic balls

Examples of Use

Plating Equipment

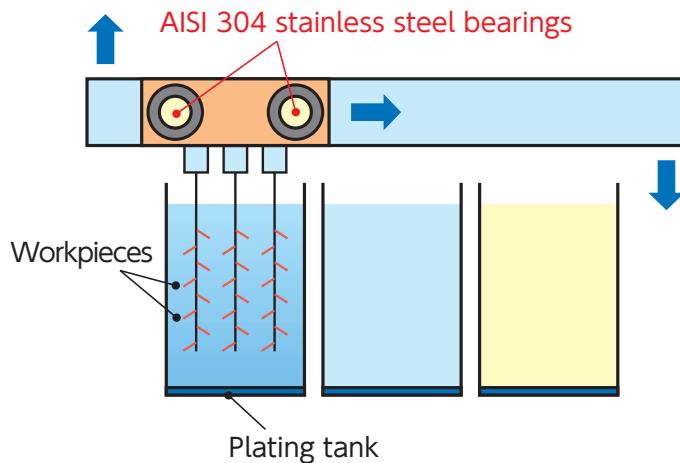

Corrosion resistance

AISI 304 stainless steel bearings (6S Series) made of corrosion-resistant materials are used for plating equipment that uses liquids such as acids and alkalis.

◆ Usage Conditions

Atmosphere : Acidic solution droplets
 Temperature : Room temperature
 Rotating speed: 20min⁻¹

Substrate Cleaning Equipment

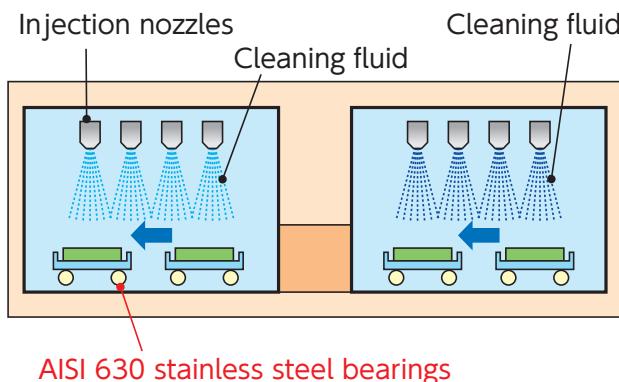

Corrosion resistance

AISI 630 stainless steel bearings (4S Series) made of corrosion-resistant materials are used for substrate cleaning equipment that uses liquids such as acids, alkalis, and water.

◆ Usage Conditions

Environment : Cleaning solution droplets
 Temperature : Room temperature to 80°C/176°F
 Rotating speed: 20min⁻¹

◆ Conventional Bearings

AISI 440C stainless steel bearings

◆ Problems

Short bearing life (1 month) due to corrosive environment

◆ Bearings Adopted

6S Series AISI 304
Stainless steel bearings

◆ Effect

Improved corrosion resistance and extended bearing life (6 months) due to use of AISI 304 stainless steel bearings

◆ Conventional Bearings

AISI 440C stainless steel bearings

◆ Problems

Short bearing life (3 months) due to corrosive environment

◆ Bearings Adopted

4S Series AISI 630
Stainless steel bearings

◆ Effect

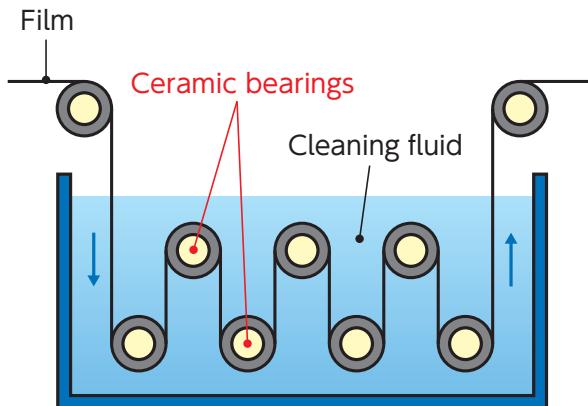

Improved corrosion resistance and extended bearing life (12 months or more) due to use of AISI 630 stainless steel bearings

Film Cleaning Equipment

Ceramic bearings (2C Series) made of highly corrosion-resistant materials are used for film cleaning equipment that uses liquids such as acids, alkalis, and water.

◆ Usage Conditions

Environment : Weak alkaline solution
Temperature : Room temperature to 80°C/176°F
Rotating speed: 100min⁻¹

Corrosion resistance

◆ Conventional Bearings

AISI 440C stainless steel bearings

◆ Problems

Short bearing life (1 month) due to corrosive environment

◆ Bearings Adopted

2C Series
Ceramic bearings

◆ Effect

Improved corrosion resistance and extended bearing life (24 months or more) due to use of ceramic bearings

Capping Equipment

Bearings filled with food grade grease (Customization) are used in food machinery.

◆ Usage Conditions

Environment : Air
Temperature : Room temperature
Rotating speed : 200min⁻¹

Food Machinery

◆ Conventional Bearings

AISI 440C stainless steel bearings

◆ Problems

Danger of grease spills

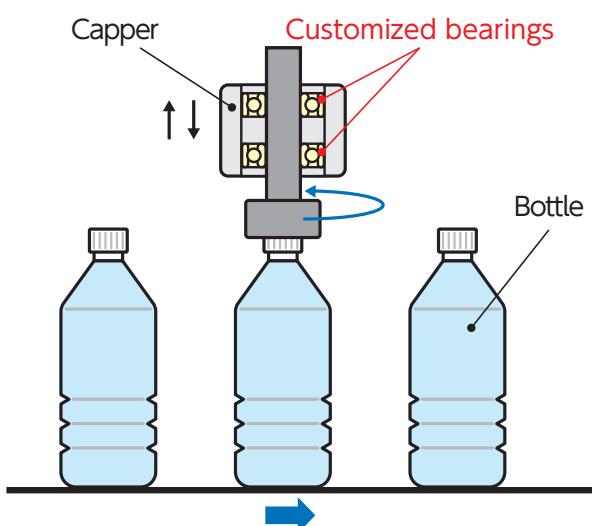

◆ Bearings Adopted

Customization: Specified grease SS Series AISI 440C
Stainless steel bearings + Filled with food-grade grease

◆ Effect

Improved safety due to filling with food-grade grease
